Hydraulic system design can cover new systems, modification to existing and also design use in Concept or Feasibility studies.

Having over 30 years of experience in design, fault finding, commissioning and maintenance of hydraulic systems, we can also help customers with problem systems, diagnosing the problems and either designing changes or proposing new components.

Designs we have been involved in have included:

-  *Simulated lift for a leisure ride*
-  *Pipe laying barge-complete hydraulic system*
-  *Replacement valve system for a military vehicle*
-  *Umbilical carousel control system*
