MGR
Fluid Engineering

We are an independent hydraulic systems consultancy with a focus on developing skills in hydraulics. Our courses ensure its participants understand the symbols and components in their systems.

We are different in that we train customers on their hydraulic systems. If you are a user or integrate hydraulics in your machinery you can benefit from our tailored courses. Our onsite courses save time travelling, subsistence costs and time away from site. The courses are not generic they are specific to the systems you have.

Typical courses cover:

-  *Hydraulic symbols*
-  *Hydraulic components*
-  *Safety*
-  *Fault Finding*
-  *Maintenance*
